

Topic Chosen

Task: Summarize a paragraph into simple points.

1. Basic Prompt

Prompt

Summarize the following paragraph into simple points:

“Artificial Intelligence is transforming industries by automating tasks, improving efficiency, and enabling data-driven decision making. AI is widely used in healthcare, education, banking, and manufacturing.”

Response

- AI is changing many industries.
 - It automates tasks.
 - It improves efficiency.
 - It helps in decision making using data.
 - AI is used in healthcare, education, banking, and manufacturing.
-

2. Zero-Shot Prompt

Definition

Zero-shot prompting means giving the model only instructions without examples.

Prompt

You are an expert summarizer. Summarize the given paragraph into 5 short bullet points using simple language.

Paragraph:

“Artificial Intelligence is transforming industries by automating tasks, improving efficiency, and enabling data-driven decision making. AI is widely used in healthcare, education, banking, and manufacturing.”

Response

- Artificial Intelligence changes industries.
- AI automates many tasks.
- It increases work efficiency.

- AI helps make better decisions using data.
- It is used in healthcare, education, banking, and manufacturing.

Observation

The response is clear, structured, and accurate even without examples.

3. Few-Shot Prompt

Definition

Few-shot prompting provides examples before asking the actual question.

Prompt

Summarize the paragraphs into short bullet points.

Example 1:

Paragraph:

“Cloud computing allows users to store and access data over the internet instead of local computers.”

Summary:

- Cloud computing stores data online.
- Users can access data through the internet.
- It reduces dependency on local storage.

Example 2:

Paragraph:

“Cybersecurity protects computer systems and networks from attacks and unauthorized access.”

Summary:

- Cybersecurity protects systems and networks.
- It prevents unauthorized access.
- It helps avoid cyber attacks.

Now summarize:

“Artificial Intelligence is transforming industries by automating tasks, improving efficiency, and enabling data-driven decision making. AI is widely used in healthcare, education, banking, and manufacturing.”

Response

- Artificial Intelligence transforms industries.
- AI automates tasks.
- It improves efficiency.
- AI supports data-based decision making.
- AI is used in healthcare, education, banking, and manufacturing.

Observation

The model follows the pattern shown in the examples and gives a more refined response.

4. Chain-of-Thought Prompt

Definition

Chain-of-Thought prompting encourages the model to reason step by step before answering.

Prompt

Read the paragraph carefully.

Step 1: Identify the main topic.

Step 2: Find the important actions or benefits mentioned.

Step 3: Identify where the technology is used.

Step 4: Convert the information into short bullet points.

Paragraph:

“Artificial Intelligence is transforming industries by automating tasks, improving efficiency, and enabling data-driven decision making. AI is widely used in healthcare, education, banking, and manufacturing.”

Response

Step 1: Main Topic

- Artificial Intelligence transforming industries.

Step 2: Important Benefits

- Automates tasks.
- Improves efficiency.

- Helps in data-driven decisions.

Step 3: Areas of Usage

- Healthcare
- Education
- Banking
- Manufacturing

Step 4: Final Summary

- AI is transforming industries.
- AI automates tasks.
- It improves efficiency.
- AI helps in better decision making.
- AI is used in healthcare, education, banking, and manufacturing.

Observation

The response is more detailed and explains the reasoning process clearly.

5. Comparative Analysis

Prompt Type	Quality	Accuracy	Depth	Clarity
Basic Prompt	Good	High	Low	Simple
Zero-Shot Prompt	Very Good	High	Medium	Clear
Few-Shot Prompt	Excellent	High	Medium	Well Structured
Chain-of-Thought Prompt	Excellent	Very High	High	Detailed

6. Evaluation Method Used

Evaluation Method: Qualitative Analysis

The responses were evaluated based on:

1. **Quality** – How well the response matches the task.
2. **Accuracy** – Correctness of summarized information.

3. **Depth** – Level of detail and explanation.
 4. **Clarity** – Ease of understanding.
-

7. Conclusion

- **Basic prompting** gives direct but simple responses.
- **Zero-shot prompting** improves structure using better instructions.
- **Few-shot prompting** improves consistency by providing examples.
- **Chain-of-Thought prompting** produces the most detailed and logical responses because reasoning is shown step by step.

Therefore, different prompting techniques significantly affect the quality and depth of AI-generated responses.
